## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17, 19 and 22-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Ronan et al. (EP 437,358)* in view of *Miyama et al. (4,733,130)*.

As to **claims 17 and 20**, Ronan discloses a glow discharge spectroscopy system, comprising:

a conductor member (7) with an aperture (8), the conductor member having a size to extend across the sample and in contact with one surface of the wafer (13) (see fig. 1);

mounting means (14,15)

a glow discharge chamber (10) with an anode and an opening adjacent the aperture (10,33) of the conductor member;

means for exerting a force on the second surface of the sample (14,15);

means for providing electrical charge (23,24);

means for spectroscopic analysis (36) (col. 6, line 18-col. 8, line 20).

Ronan differs in that the sample is not specifically disclosed as being a semiconductor wafer, however since the size of the anode plate (conductive member) may be changed (col. 7, lines 30-32) to accommodate different samples and since as shown in Miyama (col. 4, lines 60-64), glow discharge spectroscopy may be used in the analysis of semiconductor wafers, it would

have been obvious to one having ordinary skill in the art at the time of invention to use the system of Ronan to analyze a semiconductor wafer to identify components on the wafer.

As to **claim 19**, Ronan and Miyama discloses everything claimed, as applied above, in addition the conductor member is resiliently mounted to permit adjustable movement between the conductor member and the sample (col. 7, lines 15-40).

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

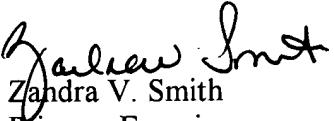

Claims 17-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 12-14 and 17 of U.S. Patent No. 6,643,013. Although the conflicting claims are not identical, they are not patentably distinct from each other because '013 provides a system for determining elements in a semiconductor wafer that includes a conductor member, mounting means, a glow discharge chamber, means for exerting a force on the wafer, means for providing supporting gas, means for providing an electrical charge and means or providing spectroscopic analysis.
